STANDARD THERMAL TRANSFER RIBBONS

Thermal transfer ribbons in the following qualities:

- Standard wax black ribbons to print on uncoated papers, matt coated papers or industrial light gloss coated papers. This quality has a high blackness density, a high print speed and low resistance to smear, scratch and solvents.
- Wax/resin black ribbons to print on matt coated papers, industrial light gloss coated papers, gloss coated papers and thermal transfer top coated films like polyethylene, polypropylene and polyester. This quality has a medium blackness density, medium-high print speed, good resistance to smear and scratch and low resistance to solvents.
- Wax/resin black ribbons for near-edge heads, to print on matt papers, matt-coated papers, industrial light gloss coated papers, gloss coated papers and thermal transfer top coated films like polyethylene, polypropylene and polyester. This quality has a medium blackness density, medium-high print speed, good resistance to smear and scratch and low resistance to solvents.
- Resin black ribbons to print on high gloss coated papers and thermal transfer top-coated films. This quality has a medium-low blackness density, medium print speed, excellent resistance to smear and scratch and excellent resistance to solvents. Normally is used with durable films in very demanding environments.
